## K–12 Computer Science Education

# Alabama

## 2017

Alabama principals' perceptions of CS are fairly positive. They consider it important and anticipate higher growth. Principals also report greater demand and support for CS among students, parents, staff, and their school boards. However, their CS offerings are less likely to include programming/coding and Advanced Placement CS.

Values below indicate percentage point difference from the U.S. average. See back for full data tables.

#### Perceptions

#### Opportunities & Participation

#### School Infrastructure

#### State Policy as of 2017<sup>1</sup>

- Dedicated state funding for CS PD
- Requires all high schools to offer CS
- ☑ K−12 CS curriculum standards in progress

#### Background

Broadening equitable student access to computer science (CS) education is critical to our future, not only because of the increasing demand for qualified workers to fill computing-related jobs but also because it develops critical thinking to solve complex problems, creativity to foster new ideas, and skills to drive innovation. To inform the public on progress made toward ensuring broad participation in K–12 CS education, this report provides results from 2014–15 and 2015–16 Google-Gallup surveys. Topics include perceptions, opportunities, support, and infrastructure. It also offers recommendations to broaden access to CS learning for Alabama.

### Findings

Results from the 2014–15 and 2015–16 Google-Gallup surveys show that while perceptions of CS are increasingly positive, there is still inconsistent implementation of CS education for students in U.S. schools.

- **Positive perceptions of CS prevail** among students, parents, and educators, including 90% of Alabama principals who believe that CS can be used in many different jobs (U.S. average 88%).
- The value of CS is high, where 65% of Alabama principals agreed that most students should be required to take CS (U.S. average 60%).
- **CS offerings are limited**, with 62% of Alabama principals reporting offering CS classes (U.S. average 57%).
- **Growth in CS opportunities is anticipated** by 57% of Alabama principals by 2019 (U.S. average 53%).

To help prepare schools for CS education, the study also identifies challenges to providing CS education for all students in Alabama.

- **Parents' demand for CS is not being heard**; 91% of U.S. parents want their child to learn CS, whereas only 10% of Alabama principals believe there is strong parent demand for CS (U.S. average 8%).
- **Principals perceive weak school board support for CS** in Alabama, with 53% indicating school board commitment (U.S. average 41%).
- Focus on test preparation for other subject areas (54%), insufficient budget for a CS teacher (48%), and lack of teachers trained in CS (43%) are the greatest barriers to offering CS for Alabama principals.

#### Recommendations

- **Promote broad, diverse participation** by taking advantage of interest and growth while integrating equity practices into CS recruitment and pedagogy.
- **Expand CS offerings** by connecting with communities, legislators, and organizations advocating for CS education.
- Integrate CS education offerings via flexible curricula, empowering teachers to incorporate CS into their subjects.
- Prioritize funding to meet the demand for CS education.
- **Increase qualified CS teachers** through incentives and support of quality teacher preparation and certification.

This report summarizes the status of computer science (CS) education using data from 18,938 surveys collected in 2014–2015 and 2015–2016 from U.S. K–12 school principals.

These data are from a multi-year Google-Gallup study of U.S. K–12 students, parents, teachers, principals, and superintendents.

## Data Tables

The descriptive data tables below show responses by 249 Alabama K–12 principals compared to the full sample of 18,938 surveys collected in 2014–2015 and 2015–2016 from U.S. K–12 school principals; sample size may vary by question. Percentage point differences from the U.S. for each category were calculated from the percentages bolded below. Full methodology is at **goo.gl/7qwXgP**.
