

# Intelligence Program Development

#### **Benefits**

- Equip your organization with the essential skills and capabilities to achieve your CTI vision
- Identify core CTI use cases for your stakeholders and drive operationalization
- Receive robust documentation and templates supporting best practices for a CTI program tailored to your business needs
- Build a road map to achieve your target CTI outcomes

## Why Mandiant?

For over a decade, Mandiant has served as a trusted advisor to hundreds of organizations, helping them develop best practices for consuming, analyzing, producing, and applying CTI.

## Building Best-in-Class Cyber Threat Intelligence Capabilities

Mandiant supports organizations as they look to implement best-in-class cyber threat intelligence (CTI) capabilities. To help organizations reduce risk and improve their security posture, we have developed an expert advisory service. Intelligence Program Development is a service that meets each customer where they are on their security journey. We analyze your specific CTI use cases and leverage our proven framework to determine the people, processes, and technologies you need to operationalize intelligence effectively.

Through close partnership and collaboration, we help you to get the most out of your security investments. You'll also access the real-world expertise of Mandiant practitioners to realize your end-state CTI program and vision.

With over 15 years of industry experience and guided by Mandiant's Intelligence Capability Framework, our consultants conduct a detailed analysis. We assess your current CTI capabilities, threat operating environment and program needs, to help you implement an intelligence-driven defense to reduce your risk and exposure.

To help organizations build and mature their CTI capabilities, Mandiant offers Intelligence Implementation Packages (IIPs). Each package focuses on a key intelligence program area:

**Operational Capability** 

**Understanding Exposure** 

**Information Management** 

**Tracking Adversaries** 

Select an individual IIP to address specific needs or adopt all four as part of a comprehensive CTI transformation. This flexible approach enables every organization to tailor its CTI program and achieve a proactive security posture. An overview of each IIP is provided in the table below:

## **Operational Capability**

Operational Capability empowers CTI teams to achieve peak performance. By analyzing current capabilities, the threat operating environment, organizational intelligence needs, and resources, teams can make informed decisions and optimize their impact. We guide your team to define roles and responsibilities, build relationships, and optimize security operations through an intelligence-driven approach. Mandiant's structured methodology helps ensure your CTI team is strategically aligned, effectively resourced, and delivers consistent value.

#### Information Management

Effective information management is crucial for CTI teams. Analysts must efficiently store, correlate, contextualize, and share data. Well-defined practices empower cyber defense teams with timely and relevant insights, minimizing data overload.

### **Understanding Exposure**

Understanding your threat exposure provides a clear picture of your security posture. It reveals vulnerabilities and the likelihood of a cyberattack exploiting them. With this knowledge, teams make informed decisions to protect assets, reducing the risk and impact of a successful attack.

#### **Tracking Adversaries**

Why track adversaries? Knowledge is power. CTI teams with up-to-date threat landscape knowledge gain a critical advantage. By monitoring adversary activity and prioritizing relevant threats, defenders can identify emerging threats, anticipate attacks, and strengthen defenses.

## Level-up CTI Support to Key Security Use Cases

Threat Hunting & Detection

Vulnerability & Exposure Management

Incident Response & Cyber Risk

We help strengthen collaboration between your cyber defense teams and key business units, while equipping your staff with advanced threat intelligence skills through tailored workshops. We work closely with you to understand your unique challenges, workflows, and technology, delivering a program that provides cross-enterprise value. Our consultants apply real-world intelligence experience, ensuring you receive the most up to date guidance.

Understanding that every customer's needs are unique, we meet you where you are. **Schedule a free consultation** today to understand how we can help you achieve your CTI goals.
