## K–12 Computer Science Education

# Maine

## 2017

Maine principals have perceptions of CS that are fairly similar to the average U.S. principal. The availability of various CS opportunities is similar to the national average but Maine's offerings are more likely to include programming/coding. However, they are less likely to indicate support for CS or to anticipate growth in CS opportunities

Values below indicate percentage point difference from the U.S. average. See back for full data tables.

#### Perceptions

#### **Opportunities & Participation**

#### School Infrastructure

State Policy as of 2017<sup>1</sup>

- Dedicated state funding for CS PD
- Requires all high schools to offer CS
- K–12 CS curriculum standards

This report summarizes the status of computer science (CS) education using data from 18,938 surveys collected in 2014–2015 and 2015–2016 from U.S. K–12 school principals.

These data are from a multi-year Google-Gallup study of U.S. K–12 students, parents, teachers, principals, and superintendents.

This report: **goo.gl/UwCXmf** All reports: **g.co/cseduresearch** 

## Background

Broadening equitable student access to computer science (CS) education is critical to our future, not only because of the increasing demand for qualified workers to fill computing-related jobs but also because it develops critical thinking to solve complex problems, creativity to foster new ideas, and skills to drive innovation. To inform the public on progress made toward ensuring broad participation in K–12 CS education, this report provides results from 2014–15 and 2015–16 Google-Gallup surveys. Topics include perceptions, opportunities, support, and infrastructure. It also offers recommendations to broaden access to CS learning for Maine.

### Findings

Results from the 2014–15 and 2015–16 Google-Gallup surveys show that while perceptions of CS are increasingly positive, there is still inconsistent implementation of CS education for students in U.S. schools.

- **Positive perceptions of CS prevail** among students, parents, and educators, including 89% of Maine principals who believe that CS can be used in many different jobs (U.S. average 88%).
- **The value of CS is high**, where 54% of Maine principals agreed that most students should be required to take CS (U.S. average 60%).
- **CS offerings are limited**, with 54% of Maine principals reporting offering CS classes (U.S. average 57%).
- Growth in CS opportunities is anticipated by 40% of Maine principals by 2019 (U.S. average 53%).

To help prepare schools for CS education, the study also identifies challenges to providing CS education for all students in Maine.

- **Parents' demand for CS is not being heard**; 91% of U.S. parents want their child to learn CS, whereas only 5% of Maine principals believe there is strong parent demand for CS (U.S. average 8%).
- **Principals perceive weak school board support for CS** in Maine, with 37% indicating school board commitment (U.S. average 41%).
- Insufficient budget for a CS teacher (63%), lack of teachers trained in CS (52%), and not enough demand from parents and students (40%), are the greatest barriers to offering CS for Maine principals.

#### Recommendations

- **Promote broad, diverse participation** by taking advantage of interest and growth while integrating equity practices into CS recruitment and pedagogy.
- **Expand CS offerings** by connecting with communities, legislators, and organizations advocating for CS education.
- Integrate CS education offerings via flexible curricula, empowering teachers to incorporate CS into their subjects.
- **Increase qualified CS teachers** through incentives and support of quality teacher preparation and certification.
- · Engage with parents and students to hear about what they perceive as important.

### Data Tables

The descriptive data tables below show responses by 180 Maine K–12 principals compared to the full sample of 18,938 surveys collected in 2014–2015 and 2015–2016 from U.S. K–12 school principals; sample size may vary by question. Percentage point differences from the U.S. for each category were calculated from the percentages bolded below. Full methodology is at **goo.gl/7qwXgP**.
