

Elevate network operations by unlocking the power of GenAI.

Customer experience is **directly linked** to network performance.

But extracting **performance-enhancing insights** from vast structured and unstructured network datasets has proven to be a **persistent challenge**.

Until now.

Optimize your network operations through **GenAI-driven insights**.

Most communication service providers (CSPs) aim to **deploy GenAI to their mobile core and access networks in the immediate to near future**.

77%

Deploy GenAI to their **mobile core network** or plan to do so within 2 years.¹

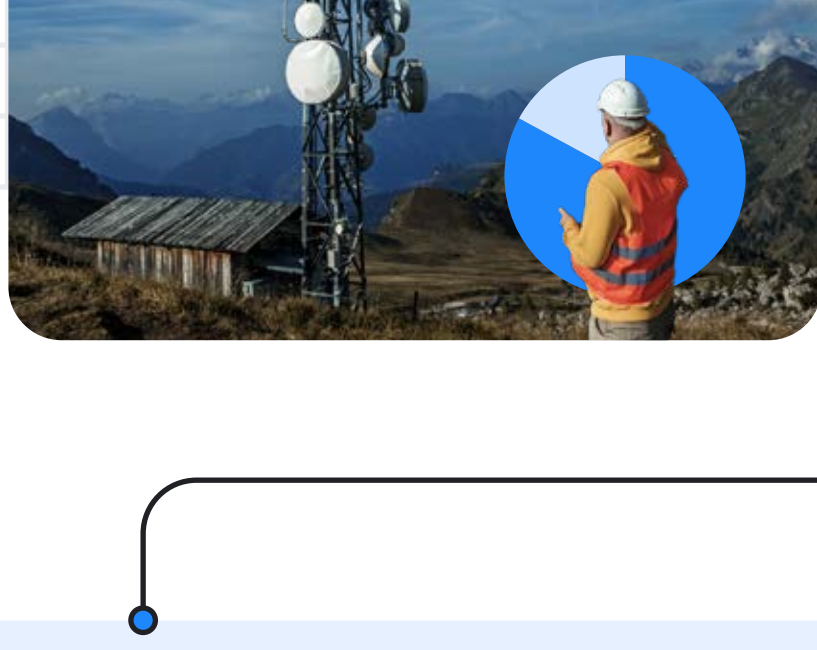

66%

Deploy GenAI to their **mobile access network** or plan to do so within 2 years.¹

Network optimization for performance and reliability are the highest strategic priorities for CSPs.

83%

Consider network optimization a **medium to very high strategic priority**.¹

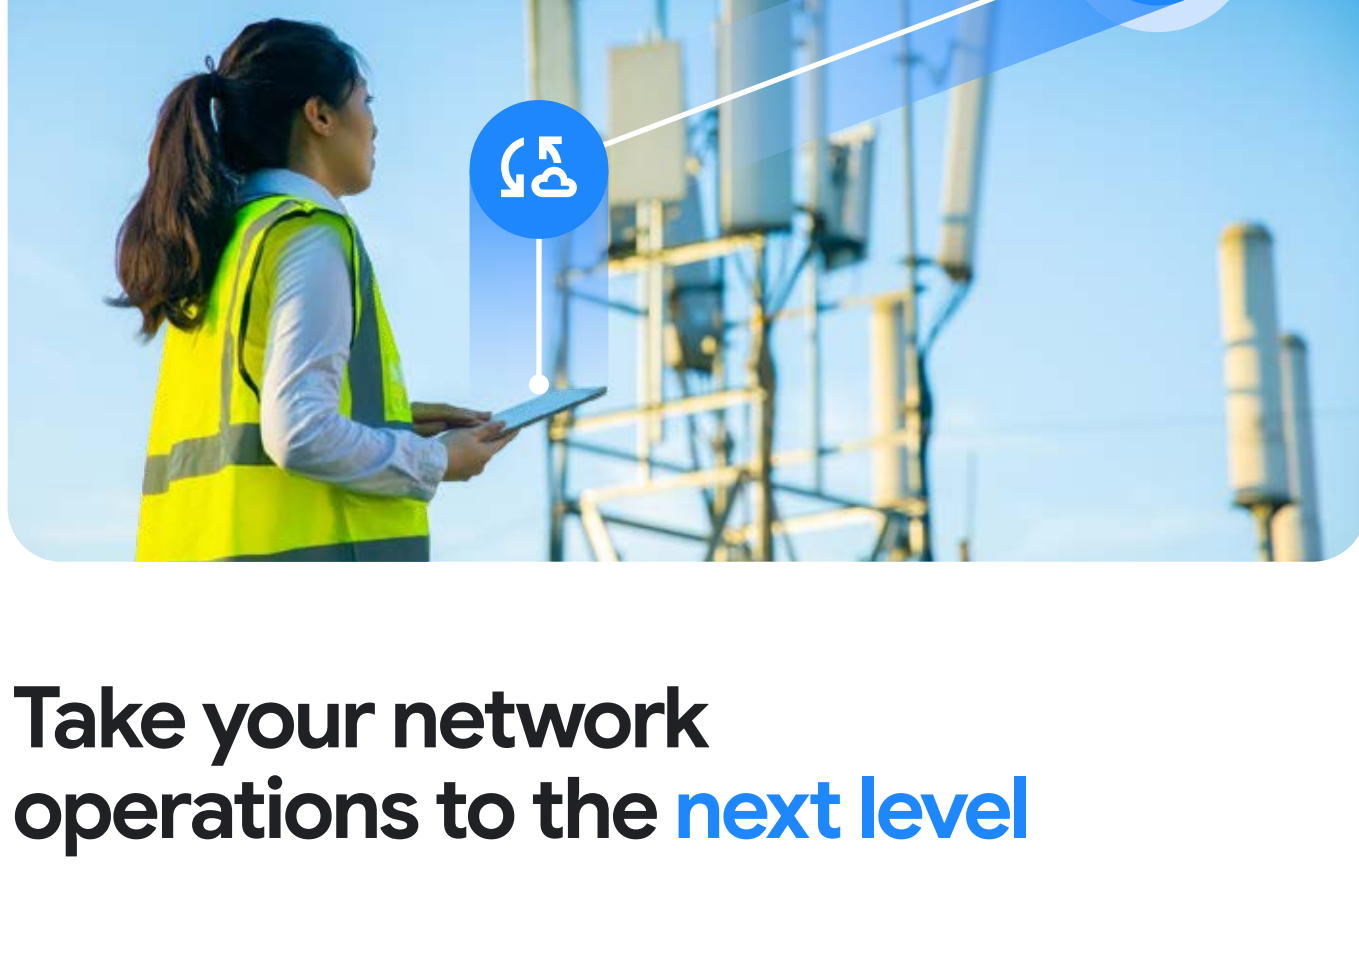

But getting **your GenAI deployment right** requires a solution built from the ground up to **prioritize performance**.

¹ GenAI in the network: CSP progress in adopting GenAI for network operations study, sponsored by Google Cloud

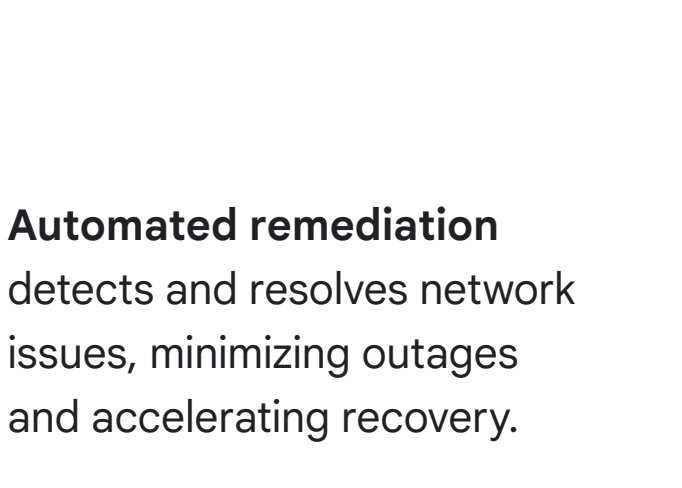

Streamline your GenAI network automation with...

Google Cloud's Gemini-powered agentic approach for network optimization

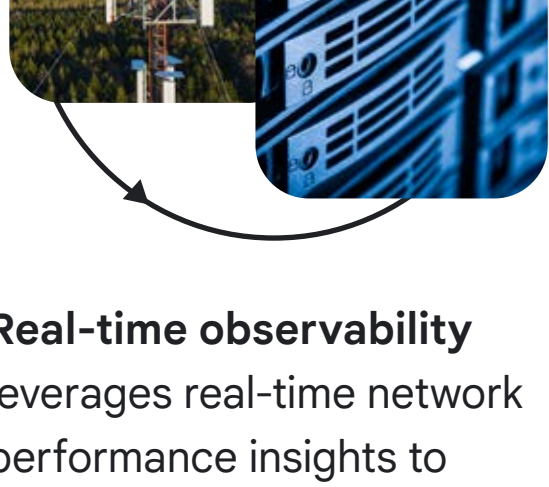

Take your network operations to the **next level**

Proactive issue detection identifies and prioritizes network problems based on their potential customer impact to ensure a seamless user experience.

Real-time observability leverages real-time network performance insights to identify and address potential issues before they affect customers.

Automated remediation detects and resolves network issues, minimizing outages and accelerating recovery.

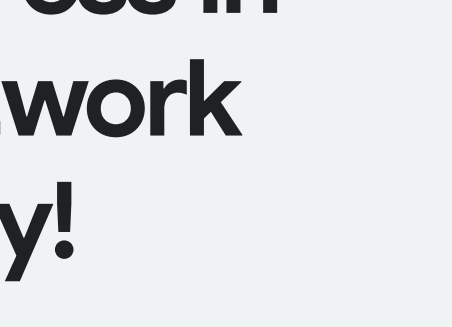

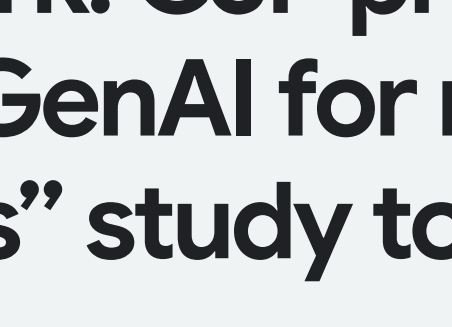

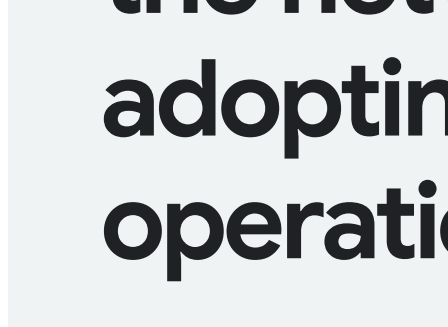

The network GenAI maturity index

Assess your readiness for deploying GenAI to Network operations, today.
